(54) Title: METAL FIBER COMPRISING MORE THAN ONE METAL OR METAL ALLOY

(57) Abstract: A metal fiber has a cross section, having a perimeter. The cross section comprises at least a first zone and a second zone, each of these zones providing a part of the perimeter. The first zone is composed of a first metal or metal alloy M1, and the second zone is composed of a second metal or metal alloy M2, for which M1 is different from M2. A method to make such fiber is provided. the method as subject of the invention comprises the steps of to - Providing a foil or plate which is composed of metal or metal alloy M1; - Applying at a first side of said foil or plate a layer of a second metal or metal alloy M2; - Coiling up said foil or plate comprising M1 and M2 on a shaft; - Rotating said shaft with coiled foil or plate and cutting the end surface of said coiled foil or plate using a cutting tool.
